## CONNECT DAY(s) 2021

May 3<sup>rd</sup>, 2021 - Online Event, Workshops & Matchmaking

May 6<sup>th</sup>, 2021 - Matchmaking

May 12<sup>th</sup>, 2021 - Workshop & Matchmaking

### What to expect?

Despite Covid-19 regulations and a digital organization, last year's event was a huge success with more than 700 online direct meetings. This year we aim again for an online event to make sure, that each participant can join regardless of the current restrictions.

SME / Solution provider

**Stream Bio**

Stream Bio Manufactures and develops a range of ultra-bright (sensitive), novel fluorescent nanoparticles, which are significantly more sensitive than existing dyes and labels such as Alexa dyes, gold nanoparticles and europium chelates (normally used in lateral flow tests). Conjugated polymer nanoparticles (CPNs™) are exceptionally brightly-emitting, stable (temp, pH), non-toxic, intensely bright fluorescent lables , capable of being functionalised with targeting molecules such as antibodies. The extreme brightness of the CPNs is down to the polymer core, which are the same polymers found in display screens. It is this intense fluorescence that can give a step change in sensitivity and detection in a variety of assays including flow cytometry, lateral flow tests, ELISA & Immunohistochemistry. At Stream we can also offer an antibody conjugation service.
